City Of Alamogordo  
1376 East 9th Street  
Alamogordo, NM 88310

Customer ID: **3484**  
Certificate: **85-C-0003**  
Site: 001  
CITY OF ALAMOGORDO

Type: ROUTINE INSPECTION  
Date: 19-DEC-2023

---

### 2.131(c)(1)

#### Repeat

#### Handling of animals.

The primary enclosure pen that houses one adult male capybara, two African crowned cranes, an adult black swan, seven adult bar-headed geese, an adult Muscovy duck and 17 adult domestic ducks has an area without a public barrier, between the primate house and the edge of the pond; there are also some areas where the grid paneling that serves as a public barrier is missing or has gaps through which the public can potentially have direct contact with the animals inside. Public barriers are important to protect both the animals and people; people or animals can be injured by unauthorized direct contact and animals can become ill if they eat food or objects presented to them by people. The licensee must ensure that there is sufficient distance and barriers of sufficient height and integrity in good repair between the animals and the general viewing public so as to assure the safety of animals and the public.

### 3.75(c)(2)

#### Housing facilities, general.

There are two adult male lemurs ("Ziptie", 23 years old and "Wilbur", 18 years old) housed in enclosures with peeling paint on the walls.

Surfaces with peeling paint cannot be properly cleaned and sanitized, and pose a risk of animal illness due to ingestion of peeled paint. The licensee must ensure that all surfaces are maintained on a regular basis to facilitate cleaning and to prevent animal illness.

TO BE CORRECTED BY DECEMBER 4, 2023

### 3.131(c)

#### Sanitation.

In the area near the outdoor enclosures housing two adult North American black bears and two adult wolves, there is a large pile of dry, brown conifer type trees discarded on the ground.

Discarded trash and other materials such as dead brush and trees that accumulate on the grounds near animal enclosures can pose a fire hazard and harbor pests and vermin that can cause animal illness and/or injury. The licensee must ensure that premises, buildings and grounds are kept clean and in good repair; accumulations of trash/debris should be cleared as necessary to protect the health and safety of the animals.

TO BE CORRECTED BY DECEMBER 22, 2023

## Inspection Report

---

### 3.131(d)

#### Sanitation.

Accumulations of rat droppings are seen on the floor in the backquarters portion of an exhibit housing one adult male South American tapir. A live adult rat was seen inside the space occupied by the tapir and within a piece of plastic conduit inside the indoor portion of the enclosure. There were no rodent traps inside the building at the time of inspection. A safe and effective program for the control of insects, ectoparasites, and avian and mammalian pests must be established and maintained so as to promote the health and well-being of the animals and reduce contamination by pests in animal areas.

TO BE CORRECTED BY JANUARY 4, 2024

This inspection and exit interview were conducted with facility representatives.
