STARCO GROUP LLC

Type: RE-LICENSE INSPECTION

Date: 25-FEB-2022

---

### 3.125(a)

#### Facilities, general.

About two feet of the chain-link fence for the sheep and goats was sagging. In other areas of the fence there were pointy ends sticking towards the inside of the enclosure. The fence is in disrepair and could possibly injure the animals or may allow the animals to get out of their pen.

The sheep and goats have a shed in their enclosure made of tin with straight edges along the sides. The animals could injure themselves while utilizing the shed. The housing should be made of materials that are safe for the animals to come in contact with.

The facility must be constructed of such material and of such strength as appropriate for the animals involved. The outdoor housing facilities shall be structurally sound and shall be maintained in good repair to protect the animals from injury and to contain the animals.

### 3.127(d)

#### Facilities, outdoor.

## Inspection Report

---

The owner had a wildebeest, two camels and four zebras that requires a six foot perimeter fence completely enclosing their primary enclosures. The current perimeter fence ends at the back end of the house but is not connected together. The perimeter fence must be at least six-feet tall and constructed so that it protects the animals in the facility by restricting animals and unauthorized persons from going through it or under it and having contact with the animals in the facility, and so that it can function as a secondary containment system for the animals in the facility. It must be of sufficient distance from the outside of the primary enclosure to prevent physical contact between animals inside the enclosure and animals or persons outside the perimeter fence.

### 3.129(a)

#### Feeding.

In the sheep and goats enclosure there was a small mound of old moldy hay in the middle of the pen. The owner stated it was for bedding and no longer used for feeding but a goat came up during the inspection and started eating from it. If hay provided is no longer wholesome or palatable it should be removed to prevent the animals from ingesting it and to maintain the health and well being of the animals.

This is a 1st Relicense Inspection for a Class C license. The inspection and exit briefing were conducted with the applicant.

All items must be in compliance within 2 more inspections or by April 26, 2022 or the Applicant will forfeit the license fee and must wait 6 months to reapply. Please contact your inspector to schedule your next Relicense Inspection.

Regulated activity can continue under your existing USDA license until it expires.
