

## Inspection Report

Capital Of Texas Zoo L L C  
376 A Jenkins Rd.  
Cedar Creek, TX 78612

Customer ID: **332212**  
Certificate: **74-C-1010**  
Site: 001  
Capital of Texas Zoo L L C

Type: ROUTINE INSPECTION  
Date: 28-SEP-2016

### 2.40(b)(2)

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

The program of veterinary care was reviewed at this inspection . There are items on the written program of veterinary care which need to be updated by the attending veterinarian. These involve medications used on certain species as well as the drug used for euthanasia . The program states that the sheep/goats will be vaccinated for Clostridium C/D Tetanus annually . Licensee stated he had not done this . The program of veterinary care must be followed and changes /additions to the written program updated as needed to assure that all animals at the facility are receiving adequate veterinary care.

CORRECT BY : 10-28-16

### 2.131(c)(1)

#### HANDLING OF ANIMALS.

The barrier fence in front of the dingo exhibit is bent, It would be easy for a member of the public to step over this and come close to the dingo enclosure. The barrier must be repaired or replaced so that it acts to keep the viewing public a safe distance from the animals to ensure the safety of both . CORRECT BY : 10-28-16

### 3.125(a) CRITICAL

#### FACILITIES, GENERAL.

Approximately 8 weeks ago, 3 of 4 wallabies in one exhibit died after becoming frightened by stray dogs running along the perimeter fence adjacent to their exhibit . The dogs caused the wallabies to run and deaths were due to heat exhaustion. One wallaby survived and is currently still housed in the exhibit. Wallabies are animals that are known to be easily frightened by predators to such an extent that they may run into objects or run excessively as these animals did . Visual barriers along exhibit fence lines can reduce the chance of this happening and is a part of housing husbandry seen at other facilities. There are bushes in the wallaby exhibit at this facility but there are no other visual barriers along the fence line to prevent the animals from being frightened . Visual barriers to prevent the wallaby from being frightened is needed along the fence line of this exhibit to protect the animal from injury .

CORRECT BY : 10-3-16

## Inspection Report

---

### 3.127(b)

#### FACILITIES, OUTDOOR.

The male camel has access to natural shade and to an enclosure for shelter from inclement weather ,however the shelter is no longer tall enough for this animal . The hump on the camels back is taller by approximately 3 inches than the doorway to the shelter. A shelter that is tall enough to comfortable house the camel from inclement weather must be provided to prevent discomfort to the animal . CORRECT BY : 10-28-16

The inspection and exit briefing was conducted with the owner.
