Site: 002

WILD THINGS ZOOFARI INC.

Type: RE-LICENSE INSPECTION

Date: 10-MAR-2022

3.75(a)

Housing facilities, general.

The heat lamps for all 7 Lemurs are located inside their enclosures. The heat lamps and electric cords are accessible to the animals as they are hanging within reach. The heat lamps and electric cords pose a risk of injury to the animal if they chew the cord or come in contact with the heat lamp . All heat lamps and electric cords must be kept out of reach of the animals to protect them from injury.

3.125(a)

Critical

Repeat

Facilities, general.

The week of February 7th ,facility records indicate 2 red kangaroos (Charlie and Sherman) were found dead in their enclosure. The applicant stated to the inspector that her pet German Shepherd likely entered an adjacent enclosure thru a gate left open by children and found a hole in the fence line of the kangaroo enclosure and chased them . This enclosure now houses 1 sheep . A metal panel has been placed over the bottom section of the hole in the fence but there is an open area at the top that would allow entrance of unwanted animals .Enclosures must be maintained structurally strong and in good repair to protect the animals from injury and contain them .

3.131(c)

Sanitation.

Inspection Report

There is hay string on the ground in the enclosure housing the camel , deer , sheep and goats . Hay string may be ingested by or become entangled on the animals . Hay string and plastic netting from round bales must be promptly removed from enclosures to protect the health of the animals.

3.137(a)

Primary enclosures used to transport live animals.

The transport enclosure used for the sloth is a wooden box with a lid that is secured with a bungee cord. The top of the box can easily be lifted creating an area for escape . Recently, the sloth was transported to an event and escaped by pushing on the top of the box and was loose on the floor board of the vehicle. A loose animal in a vehicle is a danger for both the animal and the driver. Transport enclosures must be structurally strong enough to contain the animal. The transport box for the sloth must be repaired or replaced to safely contain the animal.

This is a 2nd Re-License Inspection for a Class "C" license. The inspection and exit briefing were conducted with the applicant.

All items must be in compliance within 1 more inspection or by (March 20th-60 days counted from 1st RL Inspection) or the applicant will forfeit the license fee and must wait 6 months to reapply. Please contact your inspector to schedule your next Re-License Inspection.

Regulated activity can continue under your existing USDA license until it expires.
