Type: ROUTINE INSPECTION

Date: 30-JUL-2024

2.40(b)(2)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

The program of veterinary care states that all birds that have no history of vaccine status, be vaccinated for West Nile Virus. No vaccine records are available for review for any birds and the facility representative states the animals have not been vaccinated for West Nile Virus.

In addition, the program of veterinary care for dogs states that Bordetella vaccine be given annually and there is no record of this vaccine for "Alaska" and "Guardian" that are 2 adult wolf hybrids.

Failure to follow the program of veterinary care set by the attending veterinarian may result in illness or injury to animals. Exhibitors shall maintain programs of adequate veterinary care that include the appropriate methods to prevent, control and treat diseases and injuries.

Correct by 16 August 2024.

3.8

Exercise for dogs.

There is no written exercise plan available for review at time of inspection. Exercise for dogs is critical for overall health and psychological well-being. Dealers, exhibitors, and research facilities must develop, document, and follow an appropriate plan to provide dogs with the opportunity for exercise. In addition, the plan must be approved by the attending veterinarian. The plan must include written standard procedures to be followed in providing the opportunity for exercise.

Correct by 12 August 2024.

3.13(a)(2)

Veterinary care for dogs.

There is no record that the 2 wolf hybrids "Alaska" and "Guardian" have had a complete head to tail physical exam by the attending veterinarian in the past year. Physical examinations by the attending veterinarian are important to evaluate the overall health and physical body condition of the dogs in the facility. In addition, physical exams help the attending

Inspection Report

veterinarian evaluate chronic medical conditions, make changes to treatment and catch changes in health status. All dogs must have a complete head to tail physical examination by the attending veterinarian that occurs not less than once every 12 months.

Correct by 16 August 2024.

3.13(a)(3)

Veterinary care for dogs.

Annual heartworm and intestinal parasite testing is set in the program of veterinary care for dogs, but parasite testing has been greater than a year since it has been conducted for 2 wolf hybrids "Alaska" and "Guardian". Internal parasites such as coccidia, giardia, and heartworms are common causes of disease in dogs and if left undetected and not properly treated, can lead to serious illness. Correct by ensuring all required information listed in section 3.13(a)(3) is included in the program of veterinary care in accordance with a schedule approved by the attending veterinarian and that the program is followed.

Correct by 16 August 2024.

3.75(a)

Housing facilities, general.

Multiple electrical cords for a heating element are connected to an outdoor power outlet and are laying on the ground of the outdoor primary enclosure for 2 adult Brown Lemurs. The outdoor ambient temperature within the enclosure was 97.6F according to the Kestral instrument used by the inspector. A facility representative stated the heating element is not in use and unplugged the cords during inspection. The facility representative also stated the cords would be removed from the enclosure later that day. Failure to maintain structurally sound housing facilities for nonhuman primates that protect them from injury, such as having powered electrical cords within reach, may result in adverse events such as electrocution or strangulation. Exhibitors must design and construct housing facilities that are structurally sound for the species of nonhuman primates housed and protect them from injury.

Correct by 5 August 2024.

3.153(a)(1)(i)

Primary enclosures.

Sharp points are present in the outdoor primary enclosure for "Apache", a Scarlet Macaw. Multiple metal wires are hanging from the roof of the sheltered perch in the middle of the enclosure. One wire appears to be a broken piece of wire to secure the roof to the post. The other two wires appear to be part of a holding system meant for a lamp fixture. Sharp points and edges may cause injury to the animal. The primary enclosure must be kept in good repair and have no sharp points or edges that could injure the bird.

Correct by 12 August 2024.
