JERRY WINGARD

Type: ROUTINE INSPECTION
Date: 30-AUG-2023

3.11(b)

Cleaning, sanitization, housekeeping, and pest control.

There were approximately 3 feeders, used by approximately 4 dogs, that were dirty. The feeders had a varying degree of brown crusty material consistent with caking of feed. Inadequate cleaning of feeders can lead to pest control concerns and disease transmission affecting animal health and well-being. Used primary enclosures and food and water receptacles for dogs must be sanitized at least once every two weeks using one of the methods prescribed in 3.11(b)(3), and more often if necessary to prevent an accumulation of dirt, debris, food waste, excreta, and other disease hazards. To be corrected by 9/4/2023

3.13(b)(1)

Veterinary care for dogs.

The licensee did not have medical records demonstrating routine husbandry, including vaccinations and deworming, for some of the dogs over the last two years. Failure to properly document and maintain medical records prevents USDA inspectors from ensuring an adequate program of veterinary care and inhibits their ability to evaluate animal welfare. Dealers must keep copies of medical records for dogs and make the records available for APHIS inspection. These records must include the identity of the animal, including identifying marks, tattoos, or tags on the animal and the animal's breed, sex, and age and document routine husbandry, such as vaccinations, preventive medical procedures, or treatment, performed on all animals.

To be corrected from 30-AUG-2023

This inspection and exit interview were conducted with the licensee.
