Type: RE-LICENSE INSPECTION
Date: 09-OCT-2024

3.125(a)

Facilities, general.

-In the ram enclosure there is approximately one-foot along the bottom fence line that is beginning to curl inwards, and wires directly above have unraveled with at least one wire protruding into the enclosure.
-In an enclosure with a single-housed cow, there is approximately 2-feet of bottom fence line that is curling inward and has separated from the underlying layer of fence. An animal can get a foot caught within the fencing layers.
Animal enclosures with areas of disrepair may cause injury to the animals.
The outdoor housing facilities shall be structurally sound and shall be maintained in good repair to protect the animals from injury.

3.158(a)(1)

Cleaning, sanitization, housekeeping, and pest control.

Enclosures housing birds such as swans, flamingos, ducks, chickens, pigeons, and peafowl, have a moderate accumulation of excreta and other organic waste material present. Although the facility currently has a cleaning schedule in place for the enclosures, including perches, den boxes, and water features, the cleaning intervals are not sufficient to maintain the enclosures as required. Accumulations of excreta and waste products may increase disease hazards to animal areas. Excreta and food waste must be removed from primary enclosures and from under and around primary enclosures as often as necessary to prevent excessive accumulation of feces and food waste, to prevent soiling of the birds contained in the primary enclosures, and to reduce disease hazards, insects, pests, and odors.

3.158(b)(1)

Cleaning, sanitization, housekeeping, and pest control.

The water receptacles in two chicken enclosures have a moderate accumulation of dirt and other organic material present. Although there were other water sources available to the chickens, this does not follow husbandry standards and may increase disease hazards to animal areas. Water receptacles for birds must be sanitized as often as necessary to prevent accumulation of dirt, debris, food waste, excreta, and other disease hazards.

This is a 1st Re-License Inspection for a Class "C" license. The inspection and exit briefing were conducted with the applicant.
