Watering

12 adult beagle dogs did not have water available to them. The dogs are usually housed in enclosures with automatic "lixit" type waterers, but at the time of inspection they were being temporarily housed in other enclosures while their usual enclosures were being sanitized. The dogs had been in the temporary enclosures for 30 minutes. There were no water bowls in the enclosures and those with lixits were not connected to a water source. The dogs were immediately given water in bowls and some did not drink while others drank normally. Potable water, essential for the health and wellbeing of dogs, must be continuously available.

Correction date: October 9, 2024

This inspection and exit interview were conducted with the attending veterinarian.
