Certificate: **23-B-0224**
Site: 001
RANDALL MARTIN

Type: ROUTINE INSPECTION
Date: 09-SEP-2014

2.126(a)(2)

ACCESS AND INSPECTION OF RECORDS AND PROPERTY; SUBMISSION OF ITINERARIES.

There were no records present including sales, purchases, births and deaths. At time of inspection the owner notified APHIS inspectors that he moved to a new address on September 4, 2014. Owner stated the records are at his new address and were not available at time of inspection. Records must be available for APHIS officials to review during inspections to review business activities, document changes in ownership, and to access the health of the colony. Correct by ensuring records are available for inspection. Additionally, the licensee was advised that changes in the name, address, or business operations must be made in writing to the Eastern Regional Office within 10 days of such change. No regulated activity can be conducted at the new site until it passes inspection.

Correct by September 12, 2014

3.31(b)

SANITATION.

The facility had multiple large cobwebs hanging from the ceiling, dirt on the walls of the facility, piles of used bedding and droppings on the floor, and several loose guinea pigs (at least 4). Facility cleanliness is important to minimize the presence of environmental sources of disease, as well as pests which also pose a disease hazard to the covered species. Facility must be kept clean and in good repair and primary enclosures must prevent animals from escaping.

Correct by September 12, 2014.

3.31(c)

SANITATION.

The floor of the facility was littered with old bedding and a large amount of rodent droppings. It is unclear whether these droppings came from escaped animals or if there is a pest problem (wild rodents) present in the facility. Pests pose a risk to covered species by being a source of disease spread. An effective program for the control of mammalian pests shall be established and maintained. Facility cleanliness must be maintained to ensure continued monitoring of the pest control program efficacy. Escaped animals must be captured to prevent disease spread.
