Type: ROUTINE INSPECTION
Date: 30-OCT-2023

3.150(a) Critical

Facilities, general.

Per the licensee, on 10/16/2023 a 3 month old Rhea was located deceased entrapped in-between one outdoor shelter wall and the chain link fence surrounding the primary enclosure. The license explained that he corrected the animal's ability to access the gap between the outdoor shelter and the chain link fence so it would not occur again in the future. This correction occurred before today's inspection. If facilities are not constructed appropriately for the bird species, it can result in injury and death of the animal. Housing facilities for birds must be designed and constructed so that they are structurally sound for the species of bird housed in them and protect the birds from injury. Corrections to the facilities occurred prior to the inspection on 10/30/2023.

3.125(a)

Facilities, general.

An enclosure housing 14 goats contained two trees with protective fencing around them. The fencing around both trees was becoming unattached, bunching at the bottom of the base of the trunk, and had sharp points sticking out into the enclosure. The bunching of the fencing at the base of the tree could become a tripping hazard and sharp points sticking out can cause injury to the goats within the enclosure. The protective fencing needs to be removed or repaired so no sharp points are sticking out into the enclosure. Correct by 11/6/2023.

This inspection and exit interview were conducted with the licensee.
