JASON HENRY VICKERS

Type: ROUTINE INSPECTION

Date: 29-AUG-2014

3.126(a) REPEAT

FACILITIES, INDOOR.

Temperature in chinchilla room was measured at 78-79 degrees F; humidity measured 83-85% (all measurements taken with Kestrel 3000). Many chinchillas had ruffled fur which can be an indicator of high humidity/heat. Air conditioning was running but was not effective at lowering heat/humidity to comfortable levels for chinchillas. Dirt floor was damp and may be the source of excess humidity. (Outdoor humidity was measured at 73%). Chinchillas require cool temperatures and low humidity for their health and comfort. High heat/humidity levels may lead to heatstroke and/or death. Need to maintain adequate temperature and humidity levels.

Exit briefing conducted with licensee.
