

Inspection Report

Pueblo Zoological Society
3455 Nuckolls Ave.
Pueblo, CO 81005

Customer ID: **3507**
Certificate: **84-C-0153**
Site: 001
PUEBLO ZOOLOGICAL SOCIETY

Type: ROUTINE INSPECTION
Date: 07-JUL-2015

3.53(a)(1)

PRIMARY ENCLOSURES.

(a) General (1). Inside the sheltered portion of the enclosure housing three domestic rabbits there are three screw heads protruding from the interior surface at animal height. Protruding screws can potentially cause injury to the animals.

All Primary enclosures shall be maintained to protect the rabbits from injury.

TO BE CORRECTED BY: JULY 9, 2015

3.54(a)

FEEDING.

(a) In the sheltered portion of the enclosure housing three domestic rabbits the hay is being fed directly on the floor which is covered with bedding and feces. There is no other means present to prevent the contamination of the food. Contaminated food can potentially cause disease and reduce the palatability.

The food shall be free from contamination.

TO BE CORRECTED BY: JULY 9, 2015

3.127(c)

FACILITIES, OUTDOOR.

(c) Drainage. The outdoor enclosure housing two domestic pigs is saturated with water that is not properly draining. There are at least two water puddles and the entire outside portion of the enclosure is a muddy consistency. There are no dry areas for the animals to get out of the mud. The water source is surrounded by mud that the pigs sink into about half-way up their legs. There is the potential for foot problems and disease.

A suitable method must be provided to rapidly eliminate excess water.

Prepared By: MARY BARTELS, A C I USDA, APHIS, Animal Care

Received by Title: EXECUTIVE DIRECTOR

Date:
08-JUL-2015

Inspection Report

TO BE CORRECTED BY: JULY 13, 2015

3.127(d)

FACILITIES, OUTDOOR.

(d) Perimeter Fence. Along the perimeter fence to the left of the main entrance to the facility there are limbs hanging over the top edge against the barbed wire portion. There are multiple points of contact from trees, bushes, and vines. The over-hanging limbs allow for animals to enter or exit the facility unrestricted.

The fence must be constructed so that it protects the animals in the facility by restricting animals and function as a secondary containment system.

TO BE CORRECTED BY: JULY 21, 2015

3.129(a)

FEEDING.

(a) In the enclosure housing two domestic pigs the rubber pan that was being used as a food dish had standing water and hay debris that was soaked. Water can potentially reduce the nutritive value of the food and lead to contamination.

In the enclosure housing two African Crested Porcupines the food is being fed directly on the ground with no other measures to prevent contamination. Contaminated food can potentially cause disease and reduce palatability.

The food shall be wholesome, palatable, and free from contamination and be sufficient in quantity and nutritive value.

TO BE CORRECTED BY: JULY 9, 2015

Inspection was accompanied by Cindy Rhodes, ACI Animal Care, and a facility representative.

An exit briefing was conducted with a facility representative.

Additional Inspectors

Rhodes Cindy, Animal Care Inspector
