Customer ID: 28365

Certificate: 46-A-0426

Site: 001

D & K VANDERVLiet INC.

Type: ROUTINE INSPECTION

Date: 15-AUG-2019

3.6(a)(2)(i)

PRIMARY ENCLOSURES.

3.6(a)(2)(i)

PRIMARY ENCLOSURES.

The bottom horizontal support tubing of seven dividing panels separating eight exterior runs on the south side of the kennel building are heavily corroded with broken areas of tubing and exposed sharp edges. There is also one panel where wire has broken from tubing and is protruding into the kennel. Additionally, there is tin immediately to the left of one dog egress/entry door that is corroded with roughened areas. The protruding wire, corroded tin and broken tubing pose an injury risk to dogs occupying the affected kennels.

Primary enclosures must be constructed and maintained so that they have no sharp points or edges which could injure the dogs.

The protruding wire into occupied kennels needs to be corrected by August 16, 2019.

The broken tubing on panels in occupied kennels needs to be repaired, replaced or covered by August 20, 2019.

The corroded tin in the occupied kennel needs to be repaired, replaced or covered by August 20, 2019.

This inspection and exit interview were conducted with a facility representative.
