Type: ROUTINE INSPECTION
Date: 12-APR-2018

2.40(b)(3)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

The red fox named "Flower" was observed to have patches of hair missing from her front legs, near her body; at the base of her tail; and a patch missing from her left side, near her front left leg.

Additionally, a tailless skunk was observed to have a raw, red area above the stump.

The mammals must be observed daily to assess their health and well-being. Hair loss, wounds and/or injuries must be communicated to the attending veterinarian in a timely manner in order for such issues to be addressed.

TO BE CORRECTED BY: APRIL 16, 2018

3.1(a)

HOUSING FACILITIES, GENERAL.

Two broken fence wires are protruding into the cat enclosure. The cats were observed rubbing their necks against these metal wires. The metal points are at their head level and could cause injury to the cats housed therein. Broken mesh must be removed and/or repaired to maintain structural strength and reduce the potential for animal injury.

TO BE CORRECTED BY: APRIL 18, 2018

3.1(c)(3)

HOUSING FACILITIES, GENERAL.

The litter box for the cats is filled with feces and clumped urine. Due to this accumulation the cats cannot avoid coming into contact with excreta. Hard surfaces with which the cats come in contact must be spot-cleaned daily and sanitized to prevent accumulation of excreta and reduce disease hazards.

TO BE CORRECTED BY: APRIL 16, 2018

Prepared By: WILLS KARLA, A C I USDA, APHIS, Animal Care

Inspection Report

3.9(a)

FEEDING.

During this inspection no food was present or offered to the four cats. Cats must be fed at least once each day for their health and well-being.

Cats must be fed an appropriate diet everyday.

TO BE CORRECTED BY: APRIL 15, 2018

3.125(a)

FACILITIES, GENERAL.

The following items are in need of removal or repair:

* The black, singly housed pig has two metal hose clamps attached to the fence fabric and bottom of the enclosure fence. There are sharp edges of these clamps that are protruding into the enclosure that could injure the pig housed therein. Sharp edges of metal must be removed to prevent injury.

* There are several areas of broken wire mesh at the base of "Flower's" enclosure. The protruding points of this broken mesh could cause injury to the red fox housed therein.

* The front, bottom rail of the singly housed white pig is severely rusted and not longer structurally sound. The rusted bottom rail must be replaced to maintain structural strength.

ALL OF THE ABOVE ITEMS MUST BE CORRECTED BY: APRIL 26, 2018

3.125(d)

FACILITIES, GENERAL.

An accumulation of hay, old food and feces (enclosure clean outs) is maintained directly on the ground, approximately 2 feet behind the raccoon, skunk and rabbit enclosures. Such accumulations can cause odors, disease hazards and harborage areas for unwanted pests. Animal waste must be properly disposed of and disposal facilities shall be so provided and operated as to minimize vermin infestation, odors, and disease hazards.

TO BE CORRECTED BY: APRIL 30, 2018

3.129(b)

FEEDING.

Inspection Report

The white, plastic barrel utilized as a feed trough is covered with dried mud and dirt, inside and out. Food receptacles shall be kept clean and sanitary at all times. Additionally, food receptacles shall be placed so as to minimize contamination. This trough must be cleaned and sanitized for the health and well-being of the pigs and goat.

TO BE CORRECTED BY: APRIL 14, 2018

3.131(a)

SANITATION.

The tailless skunk has an old cucumber and feces piled in one corner of its nest box. Old food and feces must be removed and the nest box must be cleaned. Accumulations of old food and feces can harbor mold and odors. Such accumulations must be removed on a more frequent basis for the comfort and well-being of the skunk.

TO BE CORRECTED BY: APRIL 18, 2018

This inspection and exit briefing were conducted with the facility representative.
