

## Inspection Report

---

City Of Alamogordo  
1376 East 9th Street  
Alamogordo, NM 88310

Customer ID: **3484**  
Certificate: **85-C-0003**  
Site: 001  
CITY OF ALAMOGORDO

Type: ROUTINE INSPECTION  
Date: 17-APR-2023

---

### 2.75(b)(1)

#### Records: Dealers and exhibitors.

At the time of inspection, the licensee does not have a record of acquisition for three Nigerian pygmy goats.

Records containing the required information for animals disposed of or acquired for use in regulated activities, including those offspring born on premises, are necessary to accurately track animals to ensure their humane care and use. The licensee shall make, keep and maintain records of acquisition and disposition of all animals that fully and correctly disclose the required information.

TO BE CORRECTED BY 05/03/2023

### 2.131(c)(1)

#### Repeat

#### Handling of animals.

The primary enclosure pen that houses four adult domestic goats and one kid goat has areas where the solid wall has metal grates through which the public can come into direct contact with the animals inside because there is no public barrier fence to prevent this.

There is no public barrier around the pen enclosing one, adult female pig. The public can easily reach over or in to the enclosure and come into direct contact with the animal.

Public barriers are important to protect both the animals and people; people or animals can be injured by unauthorized

## Inspection Report

---

direct contact and animals can become ill if they eat food or objects presented to them by people. The licensee must ensure that there is sufficient distance and barriers of sufficient height and integrity (at least 3' in height and in good repair) between the animals and the general viewing public so as to assure the safety of animals and the public.

### 3.125(a)

### Repeat

#### Facilities, general.

On one side of the off-exhibit housing area of one male and one female adult otters, the metal gate has a patch of rust creating a very porous surface with edges that appear sharp and with which the animals could easily come into contact. The enclosure housing two, adult capybara has wire grid panels that are partially detached from the railing and bent inward, where the sharp points of the wire could come into contact with the animals.

The front-facing section of the primary enclosure housing four, adult mule deer has broken and bent chain link with sharp wire points protruding inward toward the animals.

In the primary enclosure housing four, adult sheep and one kid goat, the interior side of the door to one of the shelter buildings is broken, with sharp edges with which animals could easily come into contact.

Primary enclosures that are not in good repair or that are not constructed of such material and strength as appropriate for the animals involved can result in animal injury or entrapment. The licensee must ensure that housing enclosures are structurally sound and maintained in good repair to protect the animals from injury and to contain the animals.

This inspection and exit interview were conducted with a facility representative.
