Type: ROUTINE INSPECTION
Date: 25-MAR-2014

2.40(a)(1)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

The written Program of Veterinary Care can not be found for review to assure it is being followed. The contracted Attending Veterinarian and the licensee need to complete another written vet care program describing what veterinary care is provided to the animals and by whom. A form was provided during this inspection. To be corrected by 4-25-14.

3.125(a) REPEAT

FACILITIES, GENERAL.

A camel was obtained since the last inspection and was placed in a separate pasture. The fence on the far side and the road side of the enclosure is made of 8" X 8" wire livestock fencing which is old and rusting. On the one side strands of barb wire were placed over this fence. The rusted fence has holes in some areas, and has multiple broken wires which are protruding into the enclosure. This could potentially harm the camel. The fence needs to be repaired or replaced. Nails were protruding from posts and boards in the enclosure with 6 pigs. These were removed during the inspection.

3.127(b)

FACILITIES, OUTDOOR.

The 6 pigs are in an enclosure where the only shelter from inclement weather is a large piece of wood propped against the wire fence. The area under the enclosure is not high enough or large enough for all of the pigs to have shelter, nor do the open sides provide protection from wind and rain. More shelter needs to be provided for the pigs. The shelters for the camel and the hoofstock (zebra in one enclosure, and 1 pig, 1 alpaca, 5 goats, 9 sheep, 1 zebu, 1 watusi in a separate enclosure) do not contain any bedding. The temperatures have remained cold at night with temperatures this week falling near freezing. During periods of cold weather all animals need to be provided bedding to protect the animals from the cold dirt ground.

To be corrected by 3-26-14.

Inspection Report

WATERING.

The water in the receptacle for the 1 alpaca, 1 pig, 1 zebu, 1 watusi, 5 goats, and 9 sheep was totally brown. The water bottle for the kinkajou was empty and when the owner filled it he drank for over 3 minutes. Clean water needs to be provided often enough to provide for the health of the animals and must be available often enough to prevent thirst. To be corrected by 3-26-14.

Exit briefing conducted with licensee.
