Certificate: **74-C-0985**

Site: 001  
Yesterland Farm L L C

Type: ROUTINE INSPECTION  
Date: 25-APR-2023

---

### **2.40(b)(3) Critical**

#### **Attending veterinarian and adequate veterinary care (dealers and exhibitors).**

\*\*\*On or about April 1, 2023, in the Ring-tailed Lemur enclosure, a baby Lemur was found on the floor of the enclosure by the general public. The owners of the facility were notified and immediately responded to the enclosure to find the male and female Lemurs jumping up and down on the baby. The female was a first time mother according to the licensee. The baby Lemur was immediately removed from the enclosure and found to still be alive. Measures of warming and stimulation were performed by the staff, but baby Lemur died a short time after being removed from the enclosure. A veterinarian was not contacted. The licensee stated that they were unaware that the female was pregnant, that staff members had made a walk through check of the enclosures, but had not gotten to that enclosure for cleaning yet that morning. No baby Lemur was seen at the time of the walk though prior to opening to the public, according to the licensee. Lack of observation of breeding conditions in animals can lead to issues during pregnancy or at birth and a lack of timely and accurate communication with the veterinarian.

The licensee has since contacted the attended veterinarian for the female Lemur and has ended the possibility of further breeding.

The licensee must continue to observe animals conditions so that timely and accurate information on problems of animal health, behavior, and well-being is conveyed to the attending veterinarian.

These corrections were made by April 23, 2023 and must continue.
