Repeat

Facilities, general.

1. On the previous inspection (5/6/2021) it was noted that the green vinyl fencing, on the primary fencing, for the goat enclosure was detaching. That exposed jagged edges and gaps. This situation was still present during this inspection. And there was also a section of fence between the two sheep enclosure that was also bowing upwards and had jagged edges present. To ensure that the animals are securely contained, and not injured on this fencing, these areas will need to be addressed.
 2. During this inspection it was noted that the trailer that is being used for 2 sheep has a wooden floor. However, the wood slats, along the edges, have begun to splinter, crack, and bow upwards. To ensure that the sheep are not injured on these jagged edges and gaps, this flooring needs to be addressed.
- ***To Be Corrected By: December 18, 2021

3.127(c)

Facilities, outdoor.

During this inspection it was noted that the substrate in the alpaca enclosure was very wet. The entire enclosure, except for the shelter / trailer, was approximately 3" deep of wet mud. These 14 animals have no access to dry areas. To ensure

Watering.

During the previous inspection (5/6/2021) it was noted that the water receptacles for the goats and sheep had an accumulation of hay, grain and algae present. At this time, the water receptacles for the sheep and llamas were now noted to be dirty with hay, grain and algae. All water receptacles need to be kept clean and filled with potable water.

This inspection and exit interview were conducted with the licensee.
