Type: ROUTINE INSPECTION
Date: 29-NOV-2023

2.126(a)(2)

Access and inspection of records and property; submission of itineraries.

At the time of inspection, the licensee did not have the records available at the facility for examination by Animal Plant Health Inspection Service officials. Each exhibitor shall allow APHIS officials to examine records required to be kept by the Act and the regulations in this part; including Acquisition and Disposition records, Program of Vet Care, Environmental Enhancement Plan and Contingency Plan, in order to ensure the welfare of the animals.

Correct by 11 December, 2023

3.28(c)(1)(iii)

Primary enclosures.

The 34 adult and 10 juvenile guinea pigs were being housed in a large blue enclosure that measured 68 inches in diameter. The enclosure provided 3,630 inches of space. The adult guinea pigs required 3,434 inches of space (34 x 101) and the juveniles require 600 inches of space (10 x 60), so a total of 4,034 inches of space is required for the number of guinea pigs in the enclosure. The enclosure did not provide sufficient space, as required by the Animal Welfare Act for the number of guinea pigs housed therein.

Correct by 15 December, 2023

3.125(a)

Facilities, general.

In the large petting zoo area, a chicken wire enclosure was no longer in good repair with sharp points and accessible to the alpaca, 2 cavies and 3 kangaroos. Sharp points can cause injuries to the animals. In the sloth enclosure, the humidifier was not functioning and neither was the wall mounted heater, so a temporary heater was placed in the enclosure. Both the heater and humidifier had exposed electrical cords, and the temporary heater was on and presented a risk of injury because the heating element was exposed to the animal. Housing facilities shall be structurally sound, maintained in good repair to protect the animals from injury.

Inspection Report

3.131(d)

Sanitation.

Upon entering the facility, there was a group of flies just circling. During inspection, the employees removed the full fly strip from the kitchen area, and described the pest control program including an electric fly catcher that was down for cleaning, but it does not appear to be effective. A safe and effective program for the control of insects shall be established and maintained.

Correct by 15 December, 2023

3.150(c)(3)

Facilities, general.

During the inspection, a green winged macaw was observed to be playing with a metal object with jagged edges and sharp points. As soon as the bird dropped the item, the facility removed the item from the enclosure, identifying it as a metal bell that had been destroyed. Surfaces, including toys and other enrichment objects that come in contact with birds must be free of jagged edges or sharp points that could injure the birds.

Corrected during inspection.

3.150(f)

Facilities, general.

Open trash containers were present in both the housing and kitchen areas of the facility, and were accessible to pests and contributing to the fly issue. Trash containers must be able to contain trash securely to minimize odors and be inaccessible to animals and pests.

Correct by 15 December, 2023

This inspection and exit interview were conducted with the licensee.
