Type: ROUTINE INSPECTION
Date: 01-JUN-2016

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

A black and white Fainting Goat had hair loss covering a good portion of its body. The hair loss was observed on the back and sides of the head, the sides of the legs, and the inner parts of the back legs. The goat was noted to have flaky skin, especially in the areas of the hair loss. The licensee has not consulted with or had this condition treated by the Attending Veterinarian. Hair loss indicates there may be an underlying health issue. It can be irritable to the animal and it could potentially be contagious to other animals or even people. The Attending Veterinarian must be consulted with and the goat must be treated per his or her instructions. Correct by 6/3/16.

3.53(a)(1)

PRIMARY ENCLOSURES.

Two rabbit enclosures (each holding a rabbit) had holes in the wire flooring of the enclosures that were large enough for the rabbit to fall through. Holes in the enclosures could allow for the rabbits to escape or for a wild animal to get into the enclosure. In addition, the rabbits could get injured if they fall through the holes. Primary enclosures shall be structurally sound and maintained in good repair to protect the rabbits from injury, contain them, and to keep predators out. Correct by 6/8/16.

3.125(d)

FACILITIES, GENERAL.

In the small animal room, there was a hedgehog enclosure (had 1 hedgehog) on top of the degu enclosure (had 2 degus). There was no tray in between the enclosures or anything to prevent feces or urine from the hedgehog enclosure from falling into the degu enclosure. This is unsanitary and could easily allow for the spread of disease from the hedgehog enclosure to the degu enclosure. Provisions shall be made for the removal and disposal of animal and food wastes in the hedgehog enclosure. Correct immediately.

3.126(b)

FACILITIES, INDOOR.

An overwhelming odor was observed when walking into the small animal room (size of a small bedroom). There

Inspection Report

were over 16 animals in the room comprising over 11 species. I was not able to determine exactly where the odor was coming from. A strong odor may indicate the room is not properly ventilated. Not having a properly ventilated room may allow for disease to easily spread from animal to animal. In addition, a room that isn't properly ventilated could be an added stress to the upper respiratory systems of the animals in the room. Indoor housing facilities shall be adequately ventilated by natural or mechanical means to provide for the health and to prevent discomfort of the animals at all times. Correct by 6/8/16.

Exit interview conducted with facility representative.

End of report.
