FRIENDS OF ROOS-N-MORE, INC.

Type: ROUTINE INSPECTION

Date: 29-NOV-2016

2.126(a)(2)

ACCESS AND INSPECTION OF RECORDS AND PROPERTY; SUBMISSION OF ITINERARIES.

The facility representative stated that acquisition/disposition records were not currently on the premises and would not be available to inspectors for review during the inspection. These records are required to be kept for examination by APHIS officials during business hours for the necessary enforcement of regulations.

Correct for all future inspections.

3.125(a)

FACILITIES, GENERAL.

-Prehensile-tailed Porcupine enclosure: There was exposed underground wire meshing material in this enclosure including a section with protruding ends located in front of the water receptacle. Exposed, wire meshing with protruding ends may cause injury or entrapment of the animals.

-Nursery Yard enclosure: There was a broken, glass material panel on a shed-type structure with sharp and pointed edges in an area of potential contact with the animals. At time of inspection, there was one adult Kangaroo being housed in this enclosure. Sharp, points or edges could potentially cause injury to the animals.

-Coatimundi Enclosure: There was an exposed and unprotected electrical cord leading to a heat source inside of a plastic crate. The location of the cord was within potential reach of the animals and poses the risk of serious injury from electrical hazards.

All enclosures must be kept in good repair and free of sharp points, protruding edges or other hazards in order to protect the animals from injury and properly contain the animals. A system of timely identification, facility repair and maintenance must be in place.

Correct by 12/7/2016.
