AGBIO COMPANY

Type: ROUTINE INSPECTION
Date: 23-AUG-2021

3.50(d)

Facilities, general.

A flattened, desiccated dead mouse was found on the floor of an enclosure housing a doe and several young kits.

Provision shall be made for the removal and disposal of animal and food wastes, bedding, dead animals, and debris to minimize vermin infestation, odors, and disease hazards.

Corrected immediately during inspection

3.53(a)(4)

Primary enclosures.

An enclosure was noted to have a missing clip attaching the left side of the cage floor to the rest of the enclosure. There was a gap approximately 20 inches long and up to approximately 2 inches wide between the side and the floor of the enclosure which would potentially allow entrapment or injury of an animal's extremity.

The floors of the primary enclosures shall be constructed so as to protect the rabbits' feet and legs from injury.

Correct from this day forward.

3.56(c)

Sanitation.

Black mold and green algae was noted coating an approximately 2 by 5 foot area on the window coverings and wall siding beneath each of the misters along the north wall causing warping of the siding and discoloration and degradation of the
