Type: ROUTINE INSPECTION
Date: 13-JUL-2023

3.80(a)(2)(ix)

Primary enclosures.

A single squirrel monkey is housed in a wire frame enclosure that is rusted in many areas of the enclosure including the wire frame for the food holders. These areas of rust prevent the surfaces from being cleaned and sanitized in accordance with 3.84(b)(3) and cannot be replaced due to the structural design of the enclosure. This monkey needs to be moved to an appropriate enclosure that can be cleaned and sanitized effectively for its health and well being.
Correct by: July 18, 2023

3.81(c)(4)

Environment enhancement to promote psychological well-being.

A single squirrel monkey was pulled due to conflict in the group. He was placed in an enclosure away from the group and he has no access to visually see or hear any other species of non-human primates. The facility's current documented enrichment plan states, that if an animal is moved for medical purposes, an attempt will be made to house near other non-human primates, and the animal will have rotated enrichment and their behavior will be evaluated daily. This animal is displaying abnormal behaviors such as head circling which according to staff was not in his behavior repertoire when initially moved. The enrichment plan states, "that keepers will be trained to watch for these abnormal behaviors, provide additional room and increase enrichment". These strategies documented in the plan are not being followed. The animal was separated and moved into another building, when he should have been housed close to the group for visual access. By not following the enrichment plan, the animal is experiencing additional levels of stress leading to the development of abnormal behaviors and may make it more difficult to reintroduce him into a group of animals.
Correct by: July 17, 2023

3.125(a)

Facilities, general.

Several holding areas including the back holding for tiger and cheetah have metal bars that are rusted with rust actively flaking off when lightly touched. This amount of rust development does not allow the enclosures to be properly cleaned and this degree of rust will begin to breakdown the structural integrity of the enclosures. These areas must be addressed and maintained in good repair to keep the enclosures sound for the safety of the animals.
Correct by: Sept 17, 2023

3.126(b)

Inspection Report

Facilities, indoor.

Two young giraffes are housed in a barn off property that does not have power. There is no outdoor access, and the windows and doors were not open to allow for fresh air. This barn is not adequately ventilated to provide for the health of the animals and does not allow the animals access to fresh air. This needs to be addressed for their health and well being.

Correct by: July 17, 2023

3.127(b)

Facilities, outdoor.

In the drive through portion of the park, there is no shelter for inclement weather provided in the pasture containing the zebra, wildebeest, guanaco and oryx. A shelter must be provided to afford protection from the elements for the animals that would choose to use it in order to minimize their discomfort during inclement weather.

Correct by: Aug 30 2023

This inspection and exit interview were conducted with the park owner.
