Site: 001
JUNGLE EXOTICS

Type: ROUTINE INSPECTION
Date: 10-APR-2018

3.131(d)

SANITATION.

There was a large number of bees present throughout the facility affecting several of the animal enclosures. Traps specifically for bees have been added to the current pest control program however this effort has had a minimal effect at reducing or eliminating their large numbers. The facility representative stated that local county authorities have recently been notified of this situation. Insects such as bees may pose a health risk to the animals through stings or possible allergic reactions. Additionally insects may potentially contaminate the animals' sources of food and water.

Adequate control of insects or other pests is necessary to protect the health and well-being of the animals and to reduce contamination and potential disease hazards. A safe and effective program of pest control must be established and maintained.

Correct by 06/10/2018.

This inspection and exit interview were conducted with a facility representative.
