Type: ROUTINE INSPECTION
Date: 20-NOV-2014

3.125(a)

FACILITIES, GENERAL.

Section 3.125(a) Structural strength: The enclosure housing the alpaca, two goats and two sheep has duct tape over some of the edges and seams of the small wire mesh attached to the back wood wall to cover the sharp ends of the wire. Some of the strips of duct tape are detaching from the wire mesh. During the inspection the loose strips of duct tape were removed to prevent the animals from eating the duct tape and becoming ill. The sharp ends of the small wire fencing must be covered to prevent the animals from being injured by the wire. The material used to cover the sharp wire ends must be structurally sound and firmly attached to prevent ingestion by the animals. Correct by November 24, 2014.

An exit briefing was conducted with the facility front desk manager.
