Peeps And Creeps
8535 W. Hwy 158
Midland, TX 79707

Customer ID: **323347**
Certificate: **74-C-0886**
Site: 001
Peeps and Creeps, Inc.

Type: ROUTINE INSPECTION
Date: 05-APR-2016

3.80(a)(2)(11)

PRIMARY ENCLOSURES.

One ring-tailed lemur was housed in a bird cage approximately 4 feet tall with floor space approximately 3' x 2'. This cage does not allow this animal to make normal postural adjustments with freedom of movement typical for the species. During this inspection the animal was observed doing continuous back flips suggestive of stereotypical behavior. This animal needs to be provided with a larger enclosure that allows it to satisfy its normal behavioral needs.

To be corrected by: May 6, 2016.

3.125(a)

FACILITIES, GENERAL.

In the outdoor enclosure housing two camels and one zebra, sections of fence are curling along the bottom and have broken wires protruding inwards. In other areas, patches have been placed to fix holes but sharp points are still protruding. These points could injure an animal. There are additional areas along the fence that have wire sagging from the top horizontal pipe. This could allow an animal's head to become stuck or cause injury to an animal. These areas of broken fencing must be repaired or replaced to protect the animals from injury.

To be corrected by: May 6, 2016.

The gate for the outdoor enclosure housing two camels and one zebra has a broken horizontal rail which has become detached and is laying on the ground. This broken gate could allow animals to escape or become injured. The gate must be repaired or replaced to protect the animals from injury. To be corrected by: May 6, 2016.

The indoor cage for one raccoon was severely rusted on all corner posts. There are sharp edges on the rusty corner posts of this cage which could injure the raccoon. These areas of rusted caging must be repaired or replaced to protect the animals from injury. To be corrected by: May 6, 2016.

Prepared By: JEANNE KJOS, D V M USDA, APHIS, Animal Care

Inspection Report

3.130

WATERING.

The water bowl for the two bobcats behind the clinic was extremely dirty. At the time of this inspection, the water was

brown with a group of flies swarming over something stuck on the bowl divider. Water receptacles must be kept clean and sanitary. This bowl needs to be cleaned and a method for ensuring clean water is provided to the animals

as often as necessary for the health and comfort of the animals needs to be implemented.

To be corrected by: April 8, 2016.

3.131(c)

SANITATION.

In the barn housing three kangaroo and one wallaby, insulation material for the ceiling and walls was shredded and hanging down over the primary animal enclosures and over the exercise area for these four animals. The animals had access to an equipment storage area which has a lot of clutter and debris laying on the floor, as well as paint and

chemicals. Trash containers which were accessible to the animals were full to the top and a wild rodent was noted in

this area. Trash must be properly disposed of and maintenance supplies must be stored off the floors and away from

the walls to allow cleaning underneath and around the supplies. Animal access to this area must be prevented to prevent injury or ingestion of these materials. To be corrected by: May 6, 2016.

Inspection and exit briefing conducted by Jeanne Kjos, VMO and Cindy Digesualdo, VMO with facility representatives.
