3.78(b)

OUTDOOR HOUSING FACILITIES.

Some nonhuman primate enclosures had inadequate shelter from rain and wind. An enclosure with a howler monkey had a bamboo or wood slat-type cover over, and on the sides of, the area of the nest barrel but the spacing of the slats/strands were far apart so it would not keep rain or wind off the open-ended nest barrel. The bedding provided was sticking out of the barrel so if it rained the bedding would get wet. The enclosure with two Hamadryas baboons also had inadequate shelter from the rain. Their only shelter was a dog igloo on the ground with some shade from trees. There were no other area of the pen with overhead cover to protect them from rain. If it rains during warm humid months the inside of the igloo may also get warm and stuffy and there would be no other option for these animals to get out of the rain. Heavy rains could also cause water/mud splash into the dog igloo on the ground. Outdoor housing for nonhuman primates must provide adequate shelter from the elements (sun, rain, snow, wind, cold, and other weather conditions) at all times. Provide additional protection from rain and wind to the nonhuman primates.

Correct by 4/6/2017

3.84(a)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

In the enclosure housing five squirrel monkeys there is a cage inside their sheltered night house which had a strong odor of urine and feces. There was a large wet area and an accumulation of fecal and food waste in the shavings on the floor. There was a large pile of food waste on the elevated resting shelf in that cage as well. In the enclosures housing the two pair of tamarins the passageway tubes into their nest boxes had dark colored grime on them. The enclosure with the three young Celebes had a resting platform with a coating of brown material. Soiled surfaces should be spot cleaned daily and excreta and food waste should be remove at least daily and as often as necessary to reduce disease hazards, insects, pests and excessive odors.

Correct by 3/30/2017.

Inspection Report

FACILITIES, OUTDOOR.

The perimeter fence at the front of the property next to the camels was damaged in one section and was less than 6 feet high. This fence is also part of the overall perimeter fence for the entire property which contains potentially dangerous animals. The perimeter fence should be repaired to re-establish the required minimum height of at least 8 feet.

This inspection was conducted with two of the licensees, and the exit interview was conducted with the undersigned licensee.
