### 2.40(b)(2) Critical

#### Attending veterinarian and adequate veterinary care (dealers and exhibitors).

On July 30, 2023 a keeper reported that 2 Callimico monkeys had partly ingested a mouse which contained rodenticide in the morning. The facility was not able to contact the Attending Veterinarian (AV) until the afternoon. The AV directed no treatment due to the animals appearing normal. The animals died at later dates. The welfare reports supported death related to rodenticide toxicosis.

In this emergency situation there were delays in reaching the AV. No treatment was provided to the two non-human primates and their deaths were the result. Facilities must use appropriate methods to prevent, control, diagnose, and treat diseases and injuries of regulated animals. Facilities must also have availability of emergency, weekend, and holiday care established in the Program of Veterinary Care.

Correct by 1/17/2024.

This inspection was conducted with facility representatives on 12/19/2023. The exit interview was conducted by phone with a facility representative on 1/16/2024.
