

Inspection Report

Grace & Glory Ministries
7877 State Route 104
Oswego, NY 13126

Customer ID: **326842**
Certificate: **21-C-0430**
Site: 001
Grace & Glory Ministries

Type: ROUTINE INSPECTION
Date: 14-FEB-2024

2.131(b)(1) Critical

Handling of animals.

A four-toed hedgehog was placed in a bin inadvertently fed to a snake. This method of handling animals outside of enclosures is insufficient to protect animals from harm. Handling protocols must be designed to ensure animal handling is done as expeditiously and carefully as possible to minimize risk of harm and stress.

Correct by 2/17/24.

3.53(a)(1) Critical

Primary enclosures.

A rabbit enclosure was insufficient to keep predators out, resulting in predation by the licensee's dogs. Enclosures unable to prevent access by other animals may subject contained rabbits to stress and harm. As such, primary enclosures must be constructed and maintained in good repair to keep other animals out and to protect rabbits from injury.

Correct by 2/17/24.

3.131(a)

Sanitation.

There was excessive buildup of excreta along the fencing across from the barn in the outdoor portion of the African Crested porcupine enclosure. Buildup of excreta within enclosures may predispose animals to disease and cause excessive odor. Excreta must be removed from enclosures as often as necessary to minimize risk of contamination of animals, minimize disease hazard, and to reduce odor.

Correct by 2/21/24.

3.131(c)

Sanitation.

General housekeeping around the facility needs to be addressed. There are accumulations of dust and debris, cobwebs, and other materials throughout the facility. The yard open to the wallaby contains a structure in disrepair. There are

Inspection Report

materials stored on top of the chinchilla enclosure and on a shelf over a pig enclosure. Materials may fall off the shelf and into the pig enclosure, exposing them to injury. There are accumulations of trash in multiple areas around the premises that promote breeding and living areas for rodents and pests.

Buildings and grounds must be kept clean and in good repair to protect animals from injury and facilitate proper husbandry. Further, accumulations of trash must be placed in designated areas and cleared as necessary to protect animals.

Correct by 3/13/24.

3.131(d)

Sanitation.

The current method of pest control is insufficient to mitigate and reduce flies in the food preparation area. Flies and pests predispose diets to spoilage and contamination. Additional mitigation efforts are needed to provide for a safe and effective program for control of insects.

Correct by 2/29/24.

This inspection and exit interview were conducted with a facility representative.
