Site: 001
REBECCA GRABER

Type: ROUTINE INSPECTION
Date: 14-JAN-2015

2.131(b)(1)

HANDLING OF ANIMALS.

*** Two long haired Pomeranians had a large amount of feces stuck in their fur in the anal region. This amount of feces in the fur is an unnecessary discomfort for the dogs and these dogs need to be groomed in a timely manner to reduce this from occurring.

*** In addition a few dogs had long nails that need to be trimmed and mats that need to be removed. Matted fur pulls and separates from the skin causing discomfort to the dogs and can lead to other skin care issues. These dogs need to be on a routine grooming schedule for their health and well being.

Correct by end of business day.

3.4(b)(4)

OUTDOOR HOUSING FACILITIES.

The outside enclosures for the large breed dogs have insulated boxes but there was no additional bedding down for the dogs at the time of the inspection. The ambient temperature was 21 deg F so per the regulations the dogs need clean dry bedding material for their comfort and well being.

Correct by end of business day.

3.6(c)(1)(3)

PRIMARY ENCLOSURES.

*** The facility currently has a standard poodle with her litter in a wire mesh enclosure that does not provide 6 inches of head room for the dog when she is in a normal standing position. This needs to be addressed for the comfort of the dog and to prevent injury.

Correct by: Jan 18, 2015

Inspection Report

3.11(a) REPEAT

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

*** There was a strong ammonia odor in the whelping room during the inspection. There was an accumulation of feces underneath the enclosures that needs to be cleaned more frequently to prevent this odor build up.

*** There was an accumulation of feces in several shelter boxes that needs to be cleaned daily to prevent the dogs from being soiled while in the box.

*** Several of the outside runs had feces that were not falling through the wire mesh. These enclosures need to be spot cleaned daily to prevent this build up from occurring and for the health of the dogs.

3.11(d)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

*** In the sheltered building with attached outside runs, there were mouse droppings along the ledges and tops of the boxes. A more effective method for controlling pests needs to be maintained and this includes cleaning excess droppings from the building in a timely manner to reduce disease hazards.

Correct by: Jan 18, 2015

An exit briefing was conducted with the licensee at the time of the inspection.
