Site: 001
CLINTON HOLMES

Type: ROUTINE INSPECTION
Date: 26-MAY-2016

3.25(c)

FACILITIES, GENERAL.

Section 3.25(c) Storage: The bedding for the dwarf hamster enclosures was stored in a plastic barrel shaped container with a large split/tear down the side. The plastic lid had multiple large holes. The container for the bedding is not in good repair and may not protect the supplies from deterioration and infestation or contamination by vermin. Correct by ensuring the container for the bedding is in good repair and damaged containers/lids are replaced. Correct by May 31, 2016.

3.29(d) REPEAT

FEEDING.

Section 3.29(d) Feeding: There were 8 dwarf hamster enclosures with an excessive buildup of rust on the feeder lid: 4 Robo breeding enclosures, 2 Djungarian breeding enclosures, and 2 Djungarian holding enclosures for weaned animals. The rust may contaminate the pelleted feed and the excess rust prevents the feeders from being properly sanitized. The animals chew on the feeder lids while eating and may become ill. Correct by ensuring that the feeder lids are not rusty and rusty feeder lids are replaced.

3.30 REPEAT

WATERING.

Section 3.30 Watering: There were 11 enclosures (4 Robo and 7 Djungarian), each with two dwarf hamsters and their offspring, that had green algae in the water bottles. Drinking water containing algae may cause the hamsters to become ill. Correct by ensuring water bottles/receptacles are sanitized at a frequency that prevents the buildup of algae or debris in the water, and at a minimum of every two weeks.

An exit briefing was conducted with the co-owner.
