JOHNNY J.F. SCHWARTZ

Type: ROUTINE INSPECTION

Date: 29-MAY-2019

3.11(b)(2)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

Within at least eight enclosures housing eight Sheba Inu dogs, there were rubber water bowls that had a green discoloration (algae like substance) along the inside surfaces. The water inside the receptacles appeared to be greenish and difficult for the dogs to drink without getting the algae like matter. Water receptacles which are not properly cleaned or sanitized can harbor disease-causing organisms. This could decrease the animals' acceptability of the water, as well as increase the risk of disease. The licensee must ensure that all food and water receptacles are sanitized at least once every 2 weeks and more often if necessary to prevent an accumulation of dirt, debris, food waste and other disease hazards.

To be corrected by: June 1, 2019.

This inspection and exit interview were conducted with the facility representative.
