Type: ROUTINE INSPECTION
Date: 10-SEP-2014

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

*** Male tri-color Cavalier dog (#6) requires veterinary attention. This dog has tartar build-up on both upper arcades of teeth and there is gum recession on the upper premolars. Additionally, the gums are reddened and a whitish-grey discharge can be seen at the gumline. Dental disease can be painful and may lead to more significant health problems. This dog must be examined by a licensed veterinarian for examination and treatment. The licensee must follow and document any veterinary treatment recommendations. Documentation must be maintained for future inspection by APHIS officials.

Correct by: 9-12-14

3.6(a)(2)(1)

PRIMARY ENCLOSURES.

*** The last outside run on the left side of the front kennel has broken wires on the top of the enclosure. Also, the first upper outdoor run on the right side of the front kennel has broken wires near the bottom of the enclosure door. These wires are a potential injury hazard for the dogs and must be removed or repaired to ensure the safety of the dogs in those enclosures. Correct this by repairing these areas and maintaining all enclosures.

Correct by: 9-17-14

3.11(a)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

*** The washdowns for the indoor and outdoor runs of the front kennel are dirty and stained. These washdowns have an excessive build-up of organic material and staining. This build-up can harbor bacteria that may become a disease hazard and also can contribute to odors in the kennel. These washdowns must be cleaned on a regular basis to reduce disease hazards and odors and to satisfy accepted cleanliness standards.
