Type: ROUTINE INSPECTION
Date: 26-MAR-2015

2.40(b)(2) DIRECT REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

2.40(b)(2)

Two dogs had medical problems that had not been recognized and treated by the licensee. An adult, female English Bulldog (Stacy; m/c# 006AB6350) was limping on her left front leg. When standing still, she repeatedly held the left paw off of the ground. An adult, female English Bulldog (JD; m/c# 4B1F5A4316) had a small, red, raised lesion on her head next to her right eye. The dog's head was swollen from above the right eye to the nose. The licensee stated that this dog had escaped from its enclosure the night before, but she had not noticed the lesion and swelling. Untreated lameness and skin problems can worsen, can become infected, and can be painful. The licensee must consult a veterinarian about these two dogs and follow the recommended treatment plan.

3.6(a)(2)(2)

PRIMARY ENCLOSURES.

3.6(a)(2)(ii) Protect the dogs and cats from injury

An adult, male English Bulldog was housed in an enclosure that had a large gap between the horse panel entry gate and the t-post used to secure the side panel of the enclosure. The space was large enough that the dog could fit his head and a portion of his body through it, leaving the potential for injury, entrapment or escape. The licensee must ensure that the enclosures safely and securely contain the dogs to protect them from injury.

TO BE CORRECTED BY MARCH 27, 2015

3.6(a)(2)(3)

PRIMARY ENCLOSURES.

3.6(a)(2)(iii) Contain the dogs securely.

An adult, female English Bulldog (JD; m/c# 4B1F5A4316) had escaped from her primary enclosure the night before. The door to the enclosure was fastened at the top and bottom with twisted wire ties. The dog broke off the bottom wire tie and pushed the door open far enough to squeeze out of the enclosure. Escaped dogs can become injured

Inspection Report

or lost. The licensee must ensure that the enclosures securely contain the dogs.
TO BE CORRECTED BY MARCH 27, 2015.

3.9(b) REPEAT

FEEDING.

3.9 (b)

Two of the metal pans used as food receptacles are rusted and have a rough surface. Rusted food receptacles do not allow proper cleaning and sanitization. Feeding pans must either be made of a durable material that can be easily cleaned and sanitized or be disposable.

3.11(c)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

3.11(c) Housekeeping for premises.

A plastic bag full of insecticide containing carbaryl was laying a few inches away from an outdoor enclosure containing two weaned Pug puppies. The bag was torn and a pile of the insecticide was lying next to the chain-link enclosure. The puppies could have reach through the chain-link and ingested the insecticide. This product was not labeled for ingestion by dogs. The licensee stated that this was an old bag that she had discarded. Exposure to toxic substances can result in sickness or death. The licensee must ensure that the premises are free of accumulations of trash, junk, waste products, and discarded matter.

TO BE CORRECTED ON MARCH 26, 2015.

The juvenile, male Dachshund identified during the last inspection with a skin condition was evaluated by the licensee s attending veterinarian. This dog is no longer present at this facility.

This inspection was conducted with the licensee and Konnie Plumlee, VMO. All NCIs were discussed with the licensee during the inspection. An additional exit briefing was conducted with the licensee on 3/27/15.

Additional Inspectors
