Type: ROUTINE INSPECTION
Date: 26-SEP-2014

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

An adult black female pug with no microchip number has an abnormal left eye. The left eye has a protruding "bubble-like" bulge in the center on the eye. According to the licensee the attending veterinarian has evaluated and provided a treatment plan in the past. It was unclear at the time of inspection how long ago the treatment was administered. The licensee found an expired medication bottle containing a mixture of a steroid and antibiotic solution from 2011 that was used for treating the eye after it was evaluated by the veterinarian. The inspector called the attending veterinarian for additional information. The veterinarian stated it had been awhile since she had examined the eye on this dog. The veterinarian also stated she recommended the dog be seen and a treatment plan be administered. Eye disease can be caused by a variety of problems including infection, trauma, etc and can be painful. This animal must be examined by a licensed veterinarian an appropriate treatment plan administered. Documentation should be available on all medical problems. The diagnosis and any recommended treatment must be part of this documentation. The licensee must ensure that all animals receive adequate veterinary care at all times.

To be corrected by: October 13, 2014.

2.50(a)(1)

TIME AND METHOD OF IDENTIFICATION.

There is a black adult female pug that does not have an official form of identification. The owner stated that they use microchips as a form of identification. Upon inspection of the Dogs on Hand record 7005, a microchip number was not listed with the dog on record. The inspector requested the owner scan the dog with a scanner device. No microchip was found. Official identification is needed to ensure that each animal's identity can be known with certainty and to facilitate the inspection process. The licensee must ensure that all dogs are officially identified by collar, tattoo or microchip.

To be corrected by: October 10, 2014.

Exit interview conducted with licensee.
