Type: ROUTINE INSPECTION  
Date: 29-MAR-2019

### 3.137(a)(1)

#### PRIMARY ENCLOSURES USED TO TRANSPORT LIVE ANIMALS.

The driver's side of the trailer where the black bear is housed for exhibit and transport has a hole rusted through the wheel well by the floor. We looked at this area from the outside and could see that the hole does leave a weak area where the bear might reach the tire. The area around the hole had excessive rust and was peeling. This rusted hole is a weak area where the bear could push through the wall and injure himself while in transit. The licensee explained the design of the trailer will allow the bear to be divided away from this hole for the trip home. Ensure animals do not have access to this area during transit and repair all rust-affected areas prior to transport/exhibit use.

Correct by April 30, 2019.

This inspection and exit interview were conducted with licensee. Inspection was at the Wisconsin Outdoor Life/Field & Stream Expo at the Alliant Energy Center in Madison, WI. Licensee expressed that he won't sign the report. A copy of the report was left with the licensee and a copy will be mailed 1st class mail and certified mail.

#### Additional Inspectors

Moore Chad, Animal Care Inspector
