

## Inspection Report

William Rogers Jr  
1739 Dripping Springs Rd  
Seymour, TN 37865

Customer ID: 39327  
Certificate: 63-A-0168  
Site: 001  
ROGERS RABBITRY

Type: ROUTINE INSPECTION  
Date: 20-NOV-2019

### 3.53(a)(1)

#### PRIMARY ENCLOSURES.

\*\*\*The wire mesh composing the primary enclosures for a majority of the rabbits is very rusty. There are several areas where corrosion has occurred leaving large holes up to approximately 2 inches wide with jagged points protruding into the enclosure. The sharp jagged points and holes may allow the rabbits to become injured or possibly escape. These enclosures must be made structurally sound to protect the rabbits from injury, contain them securely within and keep predators out.

Correct by December 19, 2019.

### 3.56(a)(1)

#### SANITATION.

\*\*\*The rubber/plastic mats provided in the rabbit enclosures and the wire mesh flooring are soiled with dried and moist excreta. There is a build up of dusty and crusty material and excreta along the white PVC watering lines running along the back of the enclosures. The primary enclosures shall be kept clean and reasonably free of excreta to minimize disease hazards and contribute to the health and well-being of the rabbits..

Correct by December 19, 2019.

This inspection and exit interview were conducted with the Owner.
