Type: ROUTINE INSPECTION
Date: 12-JUL-2023

3.15(e)(1) Direct

Primary enclosures used to transport live dogs and cats.

A flight containing 40 dogs and 1 cat arrived at JFK International Airport on July 12, 2023, at 1:27 pm ET, shipped from Qingdao International Airport (Qingdao, China)(AWB# 272-73359613).

The primary enclosures for the following dogs contained inadequate space:

- A male, brown, Pomeranian, "Yuri" (microchip # 900239877803606). "Yuri" measured 18.5 inches in length and 18 inches in height, while his crate 15 inches in height.
- A male, golden, Golden Retriever "Nolan" (microchip # 900239877803763). "Nolan" measured 35 inches in length and 28.5 inches in height, while his crate measured 29 inches in length and 23 inches in height.

Inadequate space during transport can cause stress, uncomfortable conditions, and prevents normal postural adjustments. Primary enclosures used to transport live dogs must be large enough to ensure each animal has enough space to turn about normally while standing, to stand and sit erect and to lie in a natural position.

This inspection was conducted with animal facility representatives on July 12, 2023. The exit interview was conducted with an airline representative on July 17, 2023.
