Overland Park, KS 66212

Customer ID: **4082**

Certificate: **48-C-0016**

Site: 001

CITY OF OVERLAND PARK

Type: ROUTINE INSPECTION

Date: 30-JUN-2014

3.125(a) REPEAT

FACILITIES, GENERAL.

The following areas are in need of repair.

- 1) One outdoor wooden shelter structure has an estimated ten inch gap located where the back wall and left side wall join. In addition, two exposed nails were observed at the bottom. Two goats are in contact with the affected area located in outdoor housing. Sharp points and jagged edges could cause injury to the animals.
- 2) Galvanized metal fencing has become detached from the galvanized metal pipe frame on two panels. There is a one to two inch gap between the fencing and metal pipe frame. Nine young goats are in contact with the affected metal fencing located in shelter housing. This affects the ability of the enclosure fencing to contain the goats securely and could lead to injury or escape.
- 3) Two "4 by 8 " sheets of plywood on the west side of one outdoor shelter structure are broken with jagged, sharp edges. Thirty goats are in contact with the affected plywood sheets. Sharp, jagged edges could cause injury.
- 4) One cattle panel is not secured to the chain link fencing. An estimated six inch gap exists between the cattle panel and chain link fencing. Thirty goats are in contact with the affected area which is located in outdoor housing. Sharp points and jagged edges could cause injury to the animals.

The licensee must ensure all areas are kept in good repair to protect the animals from injury and to contain the animals at all times.

3.127(d)

FACILITIES, OUTDOOR.

- * The perimeter fencing does not restrict unauthorized persons from making contact with the animals at the facility. A facility representative stated that a single goat was taken from the facility in April 2011, October 2013 and again

Inspection Report

on June 28, 2014. The goats taken on October 2013 and June 28, 2014 were returned to the facility. The goat taken in 2011 was never returned. The facility must have in place an effective and customary containment with security measures. In addition, there is an estimated 72 foot area of cattle panel fencing that measured approximately five feet in height. The facility must repair, replace or modify the perimeter fencing to ensure that it is of sufficient height and construction to keep outside animals and unauthorized persons out. Correct by 7/30/14.

* The facility inspection done on 6/30/14 was conducted the animal care supervisor. The exit briefing done on 7/3/14 was conducted with the Director.
