Montgomery, AL 36109

Customer ID: **3025**
Certificate: **64-C-0003**
Site: 001
Montgomery Zoo

Type: ROUTINE INSPECTION
Date: 29-APR-2025

3.125(a) Repeat

Facilities, general.

During rounds on 4/28/2025, the attending veterinarian noted dull hair coats, areas of patchy hair loss and alopecia on the two North American river otters. This prompted the review of the diet and water quality records. The water quality records noted total chlorine values ranging between 1-1.5 parts per million (ppm) dating back to 12/27/2024. Per the attending veterinarian, choline levels should be no greater than 0.5 ppm for North American river otters and can cause significant health conditions and decreased animal welfare. Correct by constructing facilities of such material appropriate for the animals involved and maintaining the facilities in good repair to protect the animals from injury.

3.153(a)(1)(iv) Repeat

Primary enclosures.

The enclosure from the 1/29/2025 inspection that were not constructed in a manor to restrict other animals from entering has yet to be corrected. Two wild starlings that are not meant to be part of the exhibit were observed in the primary enclosure containing two Blue-and-gold macaws on the 1/29/2025 inspection. Prevention of wildlife from entering a primary enclosure prevents the transmission of disease, parasites, and pests. Primary enclosures must be constructed and maintained so that they restrict other animals from entering the enclosure.

This inspection and exit interview were conducted with a facility representative.
