Type: ROUTINE INSPECTION
Date: 03-APR-2014

3.30 REPEAT

WATERING.

Twenty seven water bottles were noted to have an algae buildup on the inside of the water containers. The 27 bottles with the algae growth must be sanitized so that the water is potable and to prevent the guinea pigs from becoming ill. Owner stated during this inspection that the water bottles are being replaced with an automatic water system in the next week. Water receptacles must be sanitized when dirty so that potable water is provided to the guinea pigs to protect the health and well-being of the animals.
Remains uncorrected.

3.31(a)(1)

SANITATION.

Primary enclosures for guinea pigs are not being cleaned adequately or often enough to remove accumulations of dust, dirt, cobwebs, soiled bedding, and debris. There is dust, dirt, cobwebs, and dirty bedding accumulating on wire surfaces, wooden supports, shelves, and enclosure floors. The cleaning process utilized is not effective in removing this accumulation. Ineffective cleaning and sanitation exposes the animals to disease hazards and health problems. Primary enclosures must be cleaned often enough to prevent an accumulation of dust, dirt, excreta, cobwebs, and debris and enclosures must be sanitized at least once every 2 weeks. Licensee must establish a program to keep enclosures clean.
Correct by April 7, 2014

3.31(b)

SANITATION.

Housekeeping. There are accumulations of dust, dirt, and cobwebs, and debris on the ceiling, walls, racks, and in empty and occupied enclosures. Animal facilities must be kept clean to ensure the health and well-being of the animals. Ineffective cleaning exposes the animals to disease hazards and health problems. Licensee must establish a program to keep the animals facilities clean.
Correct by April 7, 2014

An exit briefing was conducted with facility representative.
