Certificate: **32-A-0752**  
Site: 001  
AMOS ZOOK

Type: ROUTINE INSPECTION  
Date: 24-SEP-2019

### 2.40(b)(3)

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Several of the guinea pigs appear underweight, with thin hair coats. A number of them have chewed ears. Though noted by facility staff, a veterinarian has not been contacted nor have treatments been initiated. Animal welfare is at risk. Direct and frequent communication is required so that timely and accurate information on problems of animal health, behavior, and well-being is conveyed to the attending veterinarian. Consultation with a licensed veterinarian is needed for diagnosis and treatment.

Correct by: September 28, 2019

### 3.31(a)(1)

#### SANITATION.

Several enclosures are wet and/or heavily soiled. Shelves closer to the floor seem to be most commonly affected. Though they were cleaned and sanitized just three days ago, affected enclosures remain too dirty. A dirty environment contributes to animal stress and disease. Primary enclosures shall be cleaned and sanitized often enough to prevent an accumulation of excreta or debris. A program must be developed and maintained which provides effective cleaning and sanitation.

Correct by: October 2, 2019

This inspection and exit interview were conducted with Owner and representatives.
