TURTLE BAY EXPLORATION  
PARK

Type: ROUTINE INSPECTION

Date: 26-SEP-2023

---

### 3.153(a)(1)(ii)

#### Primary enclosures.

In the large Lory walk in aviary, the top of 2 bird cages housing the single lory, was covered with pieces of plastic welcome matting that had been attached upside down. The exposed under part of the mats had a thin film of rubber padding that the birds were observed picking small chunks off. The enclosures in the shelter building adjacent to the aviary also had the flipped over mats with birds chewing on the exposed rubber padding. The top of the metal cover around an air unit had a few large pieces of flaking and chipped paint and bird droppings around it. There was also a small area of concrete window ledge, that was not painted and had small pieces of concrete chipped away. Ingesting plastic matting, peeling paint or chipping concrete could cause injury to the birds. The primary enclosure must be constructed and maintained in good repair to protect the bird from injury.

Correct by: 10/25/2023

### 3.154

#### Environment enhancement to promote psychological well-being.

Although the facility does provide species appropriate enrichment within the enclosures, the facility did not have a documented environment enhancement plan to promote psychological well-being of their avian species as required by the Animal Welfare Act. The facility must develop, document and follow a species appropriate plan for environmental enhancement adequate to promote the psychological well-being of birds. The plan must be approved by the attending veterinarian, and at a minimum must address social grouping, environmental enrichment, special considerations, restraint, and exemptions to the plan regulation and be in accordance with currently accepted professional standards.
