Type: ROUTINE INSPECTION
Date: 04-FEB-2025

3.4(b)

Outdoor housing facilities.

Two young adult standard poodles did not have adequate shelter in their outdoor enclosure. The poodles had access to 2 shelter structures but one shelter was a medium igloo that could not fit both dogs at once and would limit the normal postural adjustments of a single dog. The second shelter structure was a small lean-to with only a roof and 3 walls; it lacked a floor, a fourth wall, and a wind break. Adequate shelter is important for dogs to stay warm and dry and escape inclement weather. All outdoor-housed dogs must have access to a shelter with a roof, 4 walls, and a floor, and is large enough for each dog to make normal postural adjustments. The shelter must also have a wind break at the entrance and contain clean, dry bedding if the temperature is below 50 degrees. Correct by 2/8/25 by ensuring all outdoor housed dogs have adequate shelters that meet the regulations.

3.10(a)

Watering

Fourteen dogs did not have water at the time of inspection. All 14 dogs were juvenile/young adult French Bulldogs that the licensee stated liked to play with/dump their water bowls. The licensee stated she currently provides fresh water in the mornings and evenings. At approximately 12pm, these dogs had not yet received water that morning. The licensee provided water and while the dogs did lap at the water when provided, they were easily distracted away from the water. Water is vital to life. Dogs without continual access to water may have difficulty maintaining hydration, regulating their body temperature, and can experience distress from thirst. Potable water must be continuously available to dogs at all times. Correct by 2/8/25

3.13(a)

Veterinary care for dogs.

The licensee was not able to provide an appropriate program of vet care in writing during the inspection. A written vaccine and deworming schedule for puppies was reviewed but it was not signed by the veterinarian. No vaccine or deworming schedule, sampling frequency for heartworms or intestinal parasites, or preventative care guidelines for adult dogs was provided. It is important to have a program of vet care in writing to ensure that the licensee is providing appropriate preventative care to their dogs under the direction of their attending veterinarian. Correct by 3/1/25 by developing and documenting in writing with signature by the veterinarian, a program of vet care that addresses regularly scheduled visits
