Type: ROUTINE INSPECTION
Date: 07-DEC-2016

3.125(a)

FACILITIES, GENERAL.

In the alpaca enclosure, there were sections of wire in the fencing that were damaged or cut, leaving sharp ends accessible to the animals. In the serval off-exhibit enclosure, the opening to the shelter box had been chewed, creating a jagged edge. Sharp ends or jagged edges have the potential to injure the animals within the enclosures.

Enclosures for all animals should be constructed in a manner that is appropriate and safe for the animals involved and should regularly be maintained so as to protect the animals from injury and to ensure their health and well-being.
