Facilities, general.

A section of metal pipe in the red fox enclosure is severely rusted and losing structural integrity. On the front wall of the fox enclosure, the bottom metal pipe has an area about one foot in length that has severely rusted and is breaking apart along the bottom edge. There are multiple holes in the metal pipe where the metal has completely rusted out. Another rusted out, small metal hole is present near the front left corner of the enclosure on the same pipe. Sharp edges from metal and disintegrating pipes can lead to injury of the animal or structural instability of the primary enclosure. Correct by ensuring all outdoor housing facilities are structurally sound and maintained in good repair to protect the animals from injury and to contain the animals.

This inspection and exit interview were conducted with the licensee.
