Type: ROUTINE INSPECTION
Date: 27-AUG-2014

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

There is an adult brown female Cocker Spaniel (microchip number 0A01480637) that is excessively matted. The dog is matted around the head and face, limbs, back and hindquarters covering approximately 75% of the body. The matted hair is balled and is tightly adhered to the skin. Matted hair can trap dirt, debris, and moisture and cause pain and discomfort. It can foster skin infections and hinder the animal's ability to move or defecate normally. The licensee must remove all matted hair and establish an effective program for coat maintenance for the health and well-being of the dog.

To be corrected by September 8, 2014.

3.1(c)(3)

HOUSING FACILITIES, GENERAL.

Cleaning.

In the large indoor housing facility, there is an excessive accumulation of dried fecal residue, dirt and fur on the floors towards the north and south ends of the waste pits. Dust, dirt and grime are observed on the walls and ceiling of the facility. Sanitization of surfaces is necessary to prevent an accumulation of excreta and other disease hazards. It indicates an unsanitary living condition exists that could lead to potential disease or health risks. The licensee must ensure that all surfaces are cleaned and sanitized once every two weeks or more often if needed.

To be corrected by: September 9, 2014.

3.1(f)

HOUSING FACILITIES, GENERAL.

Drainage and waste disposal.

There is stagnant water approximately 1/2" deep in areas mixed with fecal material and other waste under the majority of primary enclosures in the large indoor housing facility. The liquid waste is becoming moldy and there is a thin film visible on the stagnant areas. An excessive number of gnats and other small flying insects are present around the stagnant liquid. Unsanitary living conditions exist that could lead to potential disease, contamination or

Inspection Report

health risks. The potential for insect and pest infestation exists when animal waste and urine is not removed in a timely manner and continues to collect under the dogs. The licensee must provide for regular and frequent removal of animal waste, water and other fluids for the health and well-being of the dogs.

To be corrected by: September 9, 2014.

3.6(a)(2)(1)

PRIMARY ENCLOSURES.

An enclosure containing two dogs in the center aisle of the large indoor housing facility has broken wires along the bottom right portion of the front door. The sharp points could injure the dogs. The licensee must repair or replace all affected wiring to ensure the safety or health of the dogs.

To be corrected by: September 9, 2014.

3.11(d)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

Flies, gnats and other small flying insects are present throughout the large indoor housing area. The insects are observed on the walls, floor, ceiling, waste pit areas and inside the dogs' enclosures. Flies and other pests can affect the health and well-being of the dogs, as flies can transmit disease. The licensee must develop a program of effective pest control to reduce or eliminate the population of flies and other insects in the area.

To be corrected by: September 9, 2014.

Exit interview conducted with licensee.
