Type: ROUTINE INSPECTION
Date: 26-SEP-2017

3.75(e)

HOUSING FACILITIES, GENERAL.

A plastic covered bucket containing primate food intended for the marmosets contained dirt and debris mixed in with the biscuits. The owner stated that those were fresh biscuits but that he had just picked them up after he accidentally spilled them on the ground. An open bag of dry primate food was not stored in a leakproof container with a tightly fitting lid to prevent spoilage and contamination. Feeding food that has been contaminated with dirt, debris or other material could cause illness in the monkeys. Food must be stored and handled in a manner that protects it from spoilage, contamination, and vermin infestation.

Correct by Sept. 28, 2017

3.83

WATERING.

Multiple marmoset enclosures contained watering receptacles with dirty water and debris and algae build up. Drinking dirty or contaminated water could cause illness in the monkeys. Water receptacles must be kept clean and sanitized.

Correct by Sept. 27, 2017

3.84(a) REPEAT

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

There was an accumulation of dried and decaying food and fecal waste in several enclosures housing marmosets. Multiple marmoset enclosures had perches, toys, and other surfaces in the cages that were dirty and/or with dark greasy appearing staining. Some walls were also dirty and had flaking and worn paint and wood that was deteriorating. Some food receptacle holders/access portals were very rusted. Soiled surfaces and accumulation of food and fecal waste may cause a risk of diseases, odor accumulation, or pest infestation that could affect the health and well-being of the animals. Rusted or deteriorating surfaces cannot be completely cleaned. Food and excrement must be removed more frequently, and as often as necessary to prevent excessive waste accumulation, pest infestation, and disease hazards. Surfaces must be kept clean and replaced when worn.

Inspection Report

3.130

WATERING.

Water receptacles in several of the kinkajou enclosures were dirty with debris and algae growth. Dirty drinking water can cause illness in the animals. All water receptacles shall be kept clean and sanitary.

Correct by Sept. 27, 2017

3.131(a) **REPEAT**

SANITATION.

Several primary enclosures for the kinkajous were dirty with accumulations of feces and food wastes. There was an odor of decaying food coming from one kinkajou pen. Excreta and discarded food debris must be removed from primary enclosures as often as necessary to prevent contamination of the animals contained therein, to avoid attracting pests and to minimize disease hazards.

This inspection and exit interview were conducted with the licensee.
