DAKIN DAIRY FARMS INC

Type: ROUTINE INSPECTION

Date: 19-OCT-2017

---

### 2.40

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

There are 3 goats that are limping when they were walking in the pasture near the barn. One white and brown buck, one dark brown and one brown with white head goat were favoring their front left limbs while walking. According to the facility representative accompanying me during this inspection these goats have no received veterinary care. It was stated that these goats sustained injuries from jumping out of their pasture. For the health and welfare of these goats they need to be seen by the attending veterinarian.

This exhibitor shall establish and maintain programs of adequate veterinary care that include the use of appropriate methods to prevent, control, diagnose, and treat diseases and injuries.

TO BE CORRECTED BY: FEBRUARY 25, 2017.

### 3.125(a) REPEAT

#### FACILITIES, GENERAL.

There is an 8' section of wire fencing between both goat and sheep pastures that is damaged. The outdoor housing facilities shall be structurally sound and shall be maintained in good repair to protect the animals from injury and to contain the animals. This non compliance was cited during the April 4, 2017 Inspection.

### 3.127(b) REPEAT

#### FACILITIES, OUTDOOR.

The current two culverts for the goats does not provide adequate protection for over 30 goats and sheep from the heavy rains and winds at one time. Shelter shall be provided for all animals kept outdoors to afford them protection and to prevent discomfort to such animals. This non compliance was cited during the April 4, 2017, and May 10, 2016 and July 11, 2017 Inspection.

## Inspection Report

---

### 3.129(a) REPEAT

#### FEEDING.

The partial roll of hay on the ground in the goat and sheep pasture does not have a cover over it to protect it from mold from the heavy rains, standing water, excreta from pests and animals. Contaminated hay can cause respiratory illness, parasites, and other illnesses and diseases. Hay for these animals need to be protected from contamination to maintain all animals in good health. This non compliance was cited during the April 4, 2017, May 10, 2016, and July 11, 2017 Inspection.

### 3.130 REPEAT

#### WATERING.

The pasture housing the goats and sheep near the barn has a dirty receptacle lined with a green and brown substance. Water receptacles must kept clean and sanitary at all times. This non compliance was cited during the April 4, 2017, and May 16, 2016, and July 11, 2017 Inspection.

This inspection and exit interview were conducted with the facility representative.
