Type: ROUTINE INSPECTION
Date: 19-MAY-2016

3.1(c)(3)

HOUSING FACILITIES, GENERAL.

In the outdoor portion of the "whelping" building there were two enclosures housing two female adult dogs and a total of nineteen puppies that had a build-up of feces on and in the "tenderfoot" type flooring. The licensee stated that he scrapes it daily, but it has been several weeks since it has been fully cleaned and sanitized. The build-up of feces can create a disease hazard, and does not allow the dogs to utilize the outdoor space without stepping on a soiled surface.

Throughout the facility there was a build-up of brown residue on a majority of the wall surfaces and egress doors. The licensee says that he only cleans and sanitizes by power-washing two to three times a year in the "big dog" building and between litters in the whelping building. The build-up of organic material can cause a disease hazard.

The licensee must spot-clean ALL hard surfaces with which the dogs come in contact with daily and sanitized in accordance with 3.11(b), at least every two weeks or more often if necessary, to prevent accumulation of feces and reduce disease hazards.

TO BE CORRECTED BY: JUNE 2, 2016

3.6(a)(2)(1)

PRIMARY ENCLOSURES.

In two enclosures housing a total of two adult dogs and ten puppies there were sharp points.

*In the "big dog" building - metal flashing at the bottom of the egress door was bent upwards and appeared chewed.

*In the "whelping" building - metal siding in the outdoor portion of an enclosure was bent outwards and appeared chewed.

Sharp points can cause injuries to the dogs. The licensee must maintain the primary enclosures so that they have

no sharp points or edges that could injure the dogs.

TO BE CORRECTED BY: MAY 26, 2016

The kennel portion of the inspection was done with the licensee and ACI Bartels. The document portion of the inspection and exit briefing were done with a facility representative and ACI Bartels.
